

## TROTTING MIX (EQ3)

McCallum's Trotting Mix (EQ3) has now been used by trainers and race track owners since 2007. The product has received great feedback from the industry.

The product is a blend of shell and sand and delivers a number of benefits to the end user including but not limited to:

### **Particle shape, cleanliness and durability**

Trotting Mix (EQ3) is a screened and washed product free of clay and silt particles. It is entirely free of pumice.

### **Particle sizing**

The product has a good mix of particle sizes providing good stability and a consistent firmness across the track.

### **Displacement and movement**

Trotting Mix (EQ3) is not displaced easily by the horse and sulky resulting in less movement across the track. Less movement means less maintenance.

### **Excellent drainage**

Water tends to flow well through the material. Owners report less rutting and evolution of water channels through the material.

### **What customers say:**

*"This is the best material I've used in a long time"*

*"My track requires less watering and maintenance with EQ3"*

*"I have noticed my horses have had less foot injuries since we started using EQ3"*

### **Availability**

Trotting Mix (EQ3) is available all year round in the Auckland, BOP, Waikato and upper north island region.

### **Transport options**

We can provide cost effective solutions for delivery to sites.
