

URBAN DESIGN

Red rock products have been used for a number of applications in the urban design area. Specifier's are able to choose from a variety of products that can add value to any project. Our products enhance warmth and contribute to local character of the urban environment.

Red rock products can add value to your project offering several application options and alternatives to mainstream products available.

Red rock products have been used in urban settings for over 100 years and is a robust material that can be applied in various settings including:

- Pavement Borders
- Bus Stops
- Parking alcoves
- Traffic Calming
- Pedestrian Guides
- Intersection approaches
- Traffic Islands
- Cycle ways
- Colour separation for disabled and parent parking

Red rock is available in various mediums including refined aggregates, concrete mixes, honed pavers and bitumen based sealing materials including hot mix. More recently red rock has been trialed for use with epoxy systems.

We can recommend several contractors with experience in delivering red rock product and applications to a high standard.
